INTRODUCTION

North Carolina Reported Pregnancies 1999 marks the eleventh volume of the pregnancy report for North Carolina. This publication includes reported induced abortions, live births, and fetal deaths. Fetal deaths are reportable only if they are of 20 or more weeks of gestation. Total reported pregnancies represent the sum of all live births, abortions, and fetal deaths.

The first section of this report uses tables, graphs, maps, and narratives to examine statewide trends and patterns in pregnancies, live births, abortions, and fetal deaths. Subsequent sections examine selected characteristics of abortions, live births, and fetal deaths. Special emphasis is placed on abortions, since they are not reported in other publications of the State Center for Health Statistics. Finally, for the state, regions, and 100 counties, there are one-page tables summarizing resident abortions, live births, fetal deaths, and total pregnancies by race and age for both all and unmarried women. In order to reflect changes during the past decade, data year 1989 is used as a base year throughout this report.

Beginning in 1978, abortion providers voluntarily reported detailed characteristics on nearly all of their procedures. Corresponding data for earlier years were obtained from a sample and may not be representative.

Hospitals and clinics in North Carolina reported detailed information on the vast majority of all abortions performed in 1999. For those facilities not reporting 100 percent, the data has been expanded in a random manner to produce totals for each facility's number of abortions. These adjustments should not seriously bias the results. For live births and fetal deaths, reporting of the events is believed to be virtually 100 percent, although the variables include a few unknowns or not stated values.

For the maps included in this report, a procedure from SAS was used to group counties that are "most like each other" with respect to the statistic being examined. This procedure may result in very large or very small groups, depending on how the counties differ.

It is hoped that this report will serve many of the data needs of those individuals and agencies delivering and/or planning health services for the childbearing population of the state. Your comments are always welcomed. You may contact this office at (919) 733-4728, or address correspondence to:

TRENDS AND PATTERNS IN PREGNANCIES, LIVE BIRTHS, ABORTIONS, AND FETAL DEATHS

Total and race-specific measures for each year 1989-1999 are listed in the table below. After increasing 3.8 percent from 1997 to 1998, North Carolina's total *pregnancy rate* (pregnancies per 1,000 females ages 15-44) remained the same from 1998 to 1999. There was, however, an increase in the white pregnancy rate and a decrease in the minority pregnancy rate. Live births are the greatest contributor to total pregnancies, so it is not surprising that the state's *fertility rate* (live births per 1,000 females ages 15-44) has followed the same general course as the total pregnancy rate. There was a 1.7 percent increase in the total fertility rate from 1998 to 1999.

The state's *abortion rate* (abortions per 1,000 females ages 15-44) decreased from 1998 to 1999 after a slight increase from 1997 to 1998. The decrease occurred for both whites and minorities. The *abortion fraction* (abortions per 1,000 pregnancies) for whites continued to decline in 1999. After an increase from 1997 to 1998, the abortion fraction for minorities decreased by 3.1 percent. The final component of total reported pregnancies is the relatively small number of fetal deaths. The overall *fetal death rate* (fetal deaths per 1,000 deliveries) decreased by 6.3 percent from 1998 to 1999.

*Pregnancy, fertility, and abortion rates for 1989-1999 are not the same as published in some previous reports due to revised population estimates. In almost all cases, the updated total and white rates are slightly lower and minority rates are slightly higher than rates previously published.

On pages 2-3 through 2-20, maps and tables show county-specific pregnancy, fertility, and abortion rates, as well as abortion fractions for 1999. Fetal death rates are not given due to the instability of the county rates for a single year. Users are referred to the five-year fetal death rates published in *North Carolina Vital Statistics, Volume 1*.

ABORTIONS

SUMMARY OF CHARACTERISTICS OF INDUCED ABORTIONS

During 1999, the licensed facilities of North Carolina reported to the State Center for Health Statistics 32,081 abortions, a decrease of 3 percent from the number reported in 1998. Tables and graphs on the following two pages show the number of resident and occurrence abortions by county and region for 1999.

Place of Occurrence

The table on page 3-3 details 1999 North Carolina occurrences according to region and county of occurrence. Of the 32,081 abortions reported in North Carolina, 99.8 percent occurred in 10 counties. A total of 8,720 abortions or 27 percent of the state total occurred in Wake, while 25 percent occurred in Mecklenburg, and 11 percent occurred in Guilford.

In 1999, 2.3 percent of North Carolina resident abortees received abortions in other states. Of these, 54.8 percent occurred in Virginia, 23.4 percent occurred in Georgia and 19.5 percent occurred in South Carolina. The remaining 2.3 percent were reported from Kansas, Arkansas, and Oregon.

Place of Residence

During 1999, abortions to residents of North Carolina totaled 28,136, a decrease of 5.8 percent from 1998. The numbers by county of residence varied widely during 1999 with all 100 counties represented. The number of abortions by county of residence ranged from 3 to 3,581. The most populous counties accounted for the greatest frequencies, as shown on the graph on the following page.

Among abortions performed in 1999, a total of 4,600 were to residents of other states. Of these, 63.7 percent were residents of South Carolina and 28.9 percent were residents of Virginia. Tennessee accounted for 2 percent of North Carolina's nonresident abortions; Georgia 1.2 percent; and Florida and New York accounted for 0.5 percent and 0.4 percent, respectively.

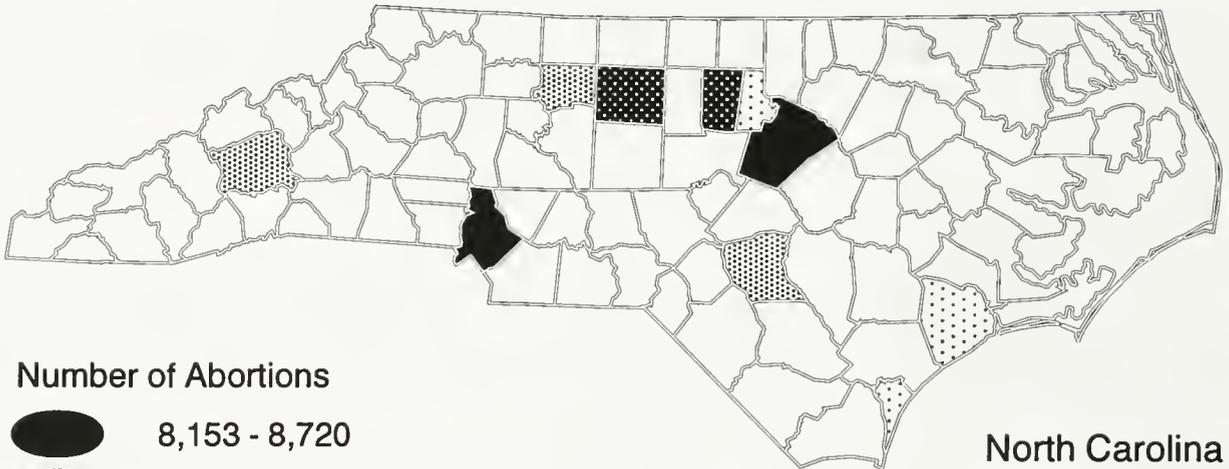

Facility of Occurrence

In 1999, 22 hospitals performed only 1.7 percent of the abortions occurring in North Carolina. The remaining 98.3 percent occurred in 30 non-hospital facilities.

Weeks of Gestation

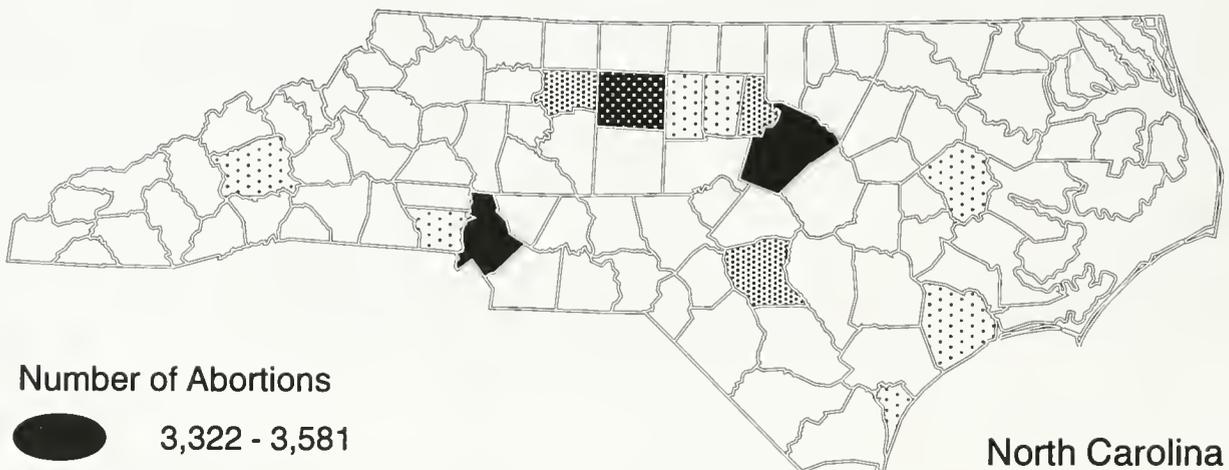

Beginning in this 1999 publication, weeks of gestation is based on the physician's estimate. This measure is thought to be more accurate than gestation calculated from the date of last menstrual period.

LIVE BIRTHS

There was an increase in the number of live births from 1998 to 1999, and an overall increase of 11 percent since 1989 to 113,755 resident live births in 1999. Here we examine several live birth trends that cause particular public health concern because of possible economic, emotional, and health consequences to the mother and/or child. Several other publications available from this office offer more detail about live births and their maternal and medical characteristics. Region and county data are also available.

FETAL DEATHS

This section examines trends in white and minority fetal deaths by race and maternal age. Race-specific fetal death rates for regions, counties, and cities are available in *North Carolina Vital Statistics, Volume 1*. Counties are urged to use 5-year fetal death rates, rather than the less stable single-year rates.

Race

Following are the numbers of resident reported fetal deaths by race from 1989 to 1999.

Maternal Age

Due to the instability of their rates, fetal death rates by race and age are not graphed here. However, the table below points to the higher rates among mothers age 35 and older, mothers age 19 and younger, as well as among minorities.

SUMMARY

SUMMARY OF REPORTED PREGNANCIES

- ◆ In 1999, there were 28,136 induced abortions to residents of North Carolina, a decrease of nearly 6 percent from 1998.
- ◆ A total of 4,600 (14.3%) of the abortions performed in North Carolina were to residents of other states.
- ◆ The average age of North Carolina residents having abortions during 1999 was 25.1.
- ◆ The highest abortion rate occurred to women ages 20-24. The abortion fraction was highest among women ages 15-19.
- ◆ Of the resident abortions reported in 1999, 47.8 percent were reported as white and 50.0 percent were reported as minority.
- ◆ Only 21.4 percent of North Carolina residents receiving abortions during 1999 were reported as being legally married. However, 5 percent of abortion records in 1999 had marital status not reported.
- ◆ The average education level of residents receiving abortions during 1999 was 12.8 years. Approximately 76 percent had at least 12 years of education, compared to 71 percent during 1989.
- ◆ Thirty-five percent of North Carolina women having abortions during 1999 reported at least one previous abortion.
- ◆ More than one-half of abortions in 1999 were reported to have occurred at 8 or fewer weeks of gestation.
- ◆ Suction curettage accounted for 56.2 percent of all resident abortion procedures reported in 1999, a significant decrease from 64.5 percent in 1998. Since the addition of dilation and evacuation as a reportable procedure, the percent of suction curettage procedures has been steadily declining. Dilation and evacuation accounted for 42.3 percent of all resident abortion procedures in 1999.
- ◆ There were 113,755 live births reported to residents of North Carolina in 1999, an increase of 11.4 percent over 1989.
- ◆ The percentage of newborns at low birthweight (less than 2,500 grams) increased slightly to 8.9 from 1998 to 1999 while very low birthweight stayed at 1.9.
- ◆ Births to mothers with no prenatal care accounted for less than one percent of all live births.

|--|--|
| <i>Abortee</i> | A woman who has received an abortion. |
| <i>Abortion Fraction</i> | The number of induced abortions per 1,000 reported pregnancies (live births + fetal deaths of 20 or more weeks gestation + induced abortions). |
| <i>Abortion Rate</i> | The number of induced abortions per 1,000 females of specified age. |
| <i>Age</i> | Age at last birthday. |
| <i>Clinic</i> | A freestanding facility, neither physically attached to nor operated by a licensed hospital, for the performance of abortions. |
| <i>Dilation and Evacuation (D & E)</i> | This procedure, used most frequently in the second trimester, involves opening the cervix (dilation) and using primarily sharp instrument techniques, but also suction and other instrumentation such as forceps for evacuation. |
| <i>Education</i> | The number of years of schooling completed. |
| <i>Fertility Rate</i> | The number of live births per 1,000 females of specified age. |
| <i>Fetal Death</i> | Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, as indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles (definition adopted by World Health Organization in 1950). Consistent with required reporting, this report includes only fetal deaths resulting from pregnancies of 20 or more weeks gestation. |
| <i>Fetal Death Rate</i> | The number of fetal deaths per 1,000 live births plus fetal deaths. |
| <i>Gestation</i> | Weeks of pregnancy as computed from date of last menstrual period. |
| <i>Gestational Age</i> | The age of the fetus in weeks. |
| <i>Hysterotomy/ Hysterectomy</i> | Hysterotomy involves surgical entry into the uterus, as in a cesarean section, that removes a fetus that is too small to survive even with extraordinary life support measures. It is usually performed only if other abortion procedures fail. Hysterectomy is a procedure in which the uterus is removed either with the fetus inside or after the fetus has been removed. It is usually performed only when a pathological condition of the uterus, such as fibroid tumor, warrants its removal or when a woman desires sterilization. |
| <i>Induced Abortion</i> | The purposeful interruption of pregnancy with the intention other than to produce a live born infant or to remove a dead fetus and which does not result in a live birth. |

| | |
|--|---|
| <i>Intra-uterine Instillation</i> | This procedure involves either withdrawing a portion of amniotic fluid from the uterine cavity by a needle inserted through the abdominal wall and replacing this fluid with a concentrated salt solution (known as saline instillation, saline abortion, or saline amniotic fluid exchange) or injecting a prostaglandin — a substance with hormonelike activity — into the uterine cavity through a needle inserted through the abdominal wall (known as intra-uterine prostaglandin instillation). The saline instillation process induces labor, which results in the expulsion of the usually dead fetus approximately 24 to 48 hours later. The interval between prostaglandin injection and expulsion tends to be shorter than in a saline abortion. |
| <i>Live Birth</i> | The complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or any definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached (definition adopted by World Health Organization in 1950). |
| <i>Living Children</i> | The number of children still living at the time of this event. |
| <i>Low Birthweight</i> | Liveborn infants who weigh under 2,500 grams (5 pounds, 8 ounces or less) at birth, regardless of the period of gestation. |
| <i>Maternal</i> | Of or pertaining to the mother. |
| <i>Married</i> | Includes women living with a husband and those who are separated but not legally divorced. In the case of live births and fetal deaths, the term also includes mothers who have been legally divorced 280 or fewer days. |
| <i>Medical (Nonsurgical)</i> | This nonsurgical procedure involves the administration of a medication or medications to induce an abortion. Medications (e.g., methotrexate, mifepristone, misoprostol, etc.) are used most frequently early in the first trimester of pregnancy. However, some medications (e.g., prostaglandin suppositories, injectable prostaglandins, etc.) may also be administered during the second trimester of pregnancy to induce abortion. Medications may be administered orally, by injection, or intra-vaginally. |
| <i>Not Married</i> | Includes women who are widowed or divorced and those who have never married. In the case of live births and fetal deaths, widowed or divorced includes only mothers who have been widowed or legally divorced for more than 280 days. |
| <i>Occurrence</i> | The facility, county, region, or state in which the event occurred. |
| <i>Perinatal</i> | Occurring at about the time of birth. |
| <i>Pregnancy Rate</i> | The number of pregnancies per 1,000 females of specified age. |
| <i>Prenatal</i> | Occurring, existing, or taking place before birth. |
| <i>Previous Abortions</i> | The number of previous induced abortions the abortee has had. The current procedure is not included. |

| | |
|------------------------------------|---|
| <i>Race</i> | Two broad categories, “white” and “minority,” are used. “Minority” is predominantly Black in North Carolina (>90%). |
| <i>Residence</i> | The usual county, region, or state of residence of the pregnant woman. |
| <i>Retained Products</i> | Fetal tissue that may remain in the uterus after an abortion. |
| <i>Sharp Curettage</i> | A procedure that involves the dilation of the cervix as in suction, although usually to a larger diameter. The fetal and placental tissues are then scraped out with a curette, which resembles a small spoon. |
| <i>Suction Curettage</i> | In this procedure the cervical canal is dilated by the successive insertion of instruments of increasing diameter. When the opening is large enough, a flexible tube is inserted into the uterine cavity and the fetal and placental tissues are then suctioned out by an electric vacuum pump. |
| <i>Very Low Birthweight</i> | Liveborn infants who weigh under 1,500 grams (3 pounds, 4 ounces or less) at birth, regardless of the period of gestation. |
